# Agenda

- Introduction to Hotel Audio
- Setting up and Managing a WiFi Hotspot
- Bluetooth speakers for smartphones

# Hotel Audio

Depending on the hotel, you could end up paying upwards of \$1500 to \$2000 just for audio each time you need to have your state conference.

Comparatively speaking, you could outfit yourself with a kit at Radio Shack for under \$350, which you can use in perpetuity.

# Mobile WiFi Hotspot

- 1. Ensure the Wireless Mobile Hotspot feature is activated in your Settings or Manage Connections area.** (Depending on your plan, the Mobile Hotspot functionality becomes automatically available on your capable smartphone.)
- 2. Open the App Tray and select “Mobile Hotspot.”** (If your device isn’t set up this way, learn your phone’s individual process by checking out a [Device Simulator](#).)
- 3. Tap the Mobile Hotspot checkbox.** (Note: The Mobile Hotspot feature can use a lot of power, so it’s a good idea to plug your phone into a charger while the feature is turned on.)
- 4. In a few moments, an icon will appear** in the notifications panel showing the availability of your new hotspot.
- 5. Computers and other connected devices can now connect to this hotspot** through Wi-Fi and share your smartphone’s data connection.

# Bluetooth Speaker & Microphone

Have you ever needed to have a phone conference where all you had available was your cell phone? It can be hard to hear with your phone's speaker and microphone....

With this relatively inexpensive option, you can have quality sound and voice wirelessly!
